

SHAHNARA MUSTHAFA

Dubai, UAE | +971 566574235 | mail.shahnara@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Security Analyst with hands-on experience in SIEM monitoring, alert triage, log analysis, incident response, and vulnerability management. Strong background in automation, detection tuning, and system testing/validation, backed by industry-recognized certifications. Detail-oriented, adaptable, and committed to continuous learning and professional growth. Thrive in challenging environments that require critical thinking to build secure and resilient systems.

CERTIFICATIONS

- Certified Ethical Hacker (CEH v13) – EC-Council
- Microsoft Certified: AZ-500 (Azure Security Associate)(Training Completed)
- Microsoft Certified: SC-900 (Security, Compliance, Identity Fundamentals)
- Fortinet NSE 1 & 2
- Google Data Management and Data Loss Prevention (Fundamentals)
- Google Cybersecurity Professional Certificate :Sound the Alarm: Detection and Response

SKILLS

Cloud Security & IAM

IAM concepts (RBAC, least privilege), Authentication & Access Control, Encryption at rest & in transit, Microsoft Azure (Sentinel, Defender for Cloud), GCP Security Labs (SCC, IAM exposure)

Security Operations

SIEM Monitoring, Alert Triage, Incident Response, Log Correlation, Threat Detection, Escalation Handling, Vulnerability Tracking

Security Tools

Microsoft Sentinel, Splunk Enterprise Security, Microsoft Defender for Cloud, Wireshark, Nmap, Metasploit Networking

TCP/IP, DNS, Network Segmentation, Firewall fundamentals, Active Directory

Frameworks

ISO 27001, MITRE ATT&CK, Cyber Kill Chain, OWASP Top 10

PROFESSIONAL EXPERIENCE

Security Analyst -MSN Emirates, Dubai (Remote)| May 2024-present

- Monitored enterprise IT and cloud authentication environments using SIEM and endpoint detection tools, analyzing 1,000+ daily events to identify suspicious authentication attempts and abnormal network behavior.
- Triage security alerts by correlating cloud and on-premises logs, validating threat indicators, and performing initial containment before escalating high-risk incidents.
- Supported tuning of detection rules to reduce false positives and improve alert accuracy.
- Assisted in vulnerability tracking and remediation coordination with system owners to align with internal security policies.
 - Maintained detailed incident documentation to support audit readiness and ISO 27001 compliance.
- Participated in cross-team discussions to address business and technical security requirements.

Associate Engineer, Verification and Integration – Nokia Networks, Bangalore | Dec 2021 – Mar 2024

- Developed and maintained automated testing workflows using Python and Robot Framework to simulate high-volume system scenarios and validate detection logic accuracy.
- Conducted in-depth log analysis and anomaly investigation during integration testing, identifying inconsistencies and improving system reliability.
- Validated system performance and behavior in large-scale network environments, ensuring stability under stress conditions.
- Documented technical findings, defect reports, and risk assessments to support engineering and management teams.
- Mentored junior engineers on secure coding fundamentals and C++ best practices; recognized with an internal award for knowledge contribution.

Cyber Security Intern – Tequed Labs, Bangalore | 2020

- Built and managed virtual cybersecurity labs using Kali Linux to simulate attack-defense scenarios.
- Conducted vulnerability assessments and network scanning using Nmap, Metasploit, and Wireshark.
- Applied OSINT techniques and social engineering methodologies for reconnaissance exercises.
- Strengthened foundational knowledge in TCP/IP, HTTP/S, routing, switching, and Linux systems.
- Explored and mapped simulated attacks to MITRE ATT&CK and OWASP Top 10 frameworks.

PROJECTS AND LABS

- **Live SOC Monitoring – TryHackMe**
 - Monitored real-time simulated SOC alerts, conducted triage, investigated incidents, and mapped findings to MITRE ATT&CK techniques.
 - Analyzed authentication abuse, phishing indicators, and lateral movement patterns in controlled lab environments.
 - Documented incident findings and remediation recommendations.
- **Active Directory Deployment & Administration – Virtual Lab**
 - Designed and deployed a virtual Active Directory environment supporting domain-based authentication and delegated access control.
 - Implemented identity management policies and tested access control configurations.
- **Virtual Experience Programs (Forage)**
 - **Mastercard:** Identified phishing indicators and contributed to awareness and response recommendations.
 - **Deloitte Australia:** Investigated web logs and user activity in a simulated breach scenario.

EDUCATION

Bachelor of Engineering in Computer Science | (2017-2021)

GSSS Institute of Engineering and Technology, Mysore
